VIORA BILLS

Complete User & Operations Manual

Comprehensive Guide from Installation to GST Billing & Automated Dispatch

1. Executive Overview & System Architecture

Enterprise-grade billing application designed for Indian GST compliance

Viora Bills is a full-stack, web-based invoice management platform engineered specifically for Indian businesses. Built with TypeScript, React 18, Vite, Node.js, Express, and PostgreSQL with Prisma ORM, it provides precision GST calculations, immutable historical snapshots, automated sequential invoicing, PDF exports, and instant customer dispatch via WhatsApp and Gmail.

> **LATEST UPDATE — VERSION 1.1**
>
> Includes direct WhatsApp API & Gmail dispatch integration, 10-digit customer mobile validation, mandatory company credentials guardrail, and modern purple UI theme.

2. Prerequisites & System Requirements

- **Node.js:** v18.0.0 or higher (v20+ recommended)
- **npm:** v9.0.0 or higher (packaged with Node.js)
- **PostgreSQL:** v14.0 or higher (port 5432 or 5433)
- **Supported Browsers:** Chrome, Edge, Firefox, Brave, Safari

3. Download & Setup Guide

Two methods to get the codebase onto your local environment

Option A: If Downloaded as ZIP from GitHub

When downloading as a ZIP, dependencies and environment files are not included. Follow these 3 setup steps:

```
cd Viora_Project-main\Viora_Project-main
npm install
cp server/.env.example server/.env
npm run dev
```

Option B: If Cloning via Git

```
git clone https://github.com/YSK2005/Viora_Project.git
cd Viora_Project
npm install
cp server/.env.example server/.env
npm run dev
```

4. Environment & Database Configuration

Prisma Schema & PostgreSQL Connection

Ensure your server/.env file contains your PostgreSQL database credentials:

```
PORT=5000
NODE_ENV=development
CLIENT_URL=http://localhost:5173
DATABASE_URL="postgresql://postgres:your_password@127.0.0.1:5433/viora_bills?schema=public"
```

Initialize the database schema and sample data:

```
npx prisma migrate dev --name init --schema=server/prisma/schema.prisma
npm run prisma:seed --workspace=server
```

5. Step-by-Step Feature Usage Workflow

End-to-end lifecycle from settings to payments

1. **Business Settings (Mandatory Setup)**
   Navigate to Settings. Enter your Business Name, 15-digit GSTIN, Address, State, Company Phone/WhatsApp, and Official Gmail. Note: The system will block invoice issuance until company phone and Gmail are saved.
2. **Customer Onboarding**
   Go to Customers -> click "+ New Customer". Enter the customer name, state, and contact details. Phone must be exactly 10 digits (system prefixes +91 automatically). At least one contact method (phone or email) is strictly required.
3. **Product & Service Catalog**
   Go to Products -> click "+ New Product". Specify the product name, optional HSN/SAC code, measurement unit (PCS, HRS, KG, MTR, BOX, SET), base unit price, and standard GST rate (0%, 5%, 12%, 18%, 28%).
4. **Create & Issue Invoices**
   Go to Invoices -> click "+ Create Invoice". Choose your customer. Select Place of Supply (automatic CGST+SGST for intra-state, or IGST for inter-state). Add items and optional discounts. Click "Issue Invoice" to transition from DRAFT to immutable ISSUED status with sequential number (INV-YYYY-XXXXXX).
5. **Automated WhatsApp & Gmail Dispatch**
   Upon issuance, the Dispatch Modal opens automatically. Click "Send via WhatsApp" to open WhatsApp web/app with pre-filled invoice breakdown and payment details. Click "Send via Gmail" to launch Google Mail with full invoice summary pre-filled.
6. **Payment Tracking & PDF Downloads**
   Record partial or full payments (Cash, UPI, Bank Transfer, Cheque) against any issued invoice. Status transitions automatically (UNPAID -> PARTIALLY_PAID -> PAID). Click "Preview / PDF" to stream or print clean A4 documents.

6. Troubleshooting & Diagnostics Reference

Quick solutions for common setup and operational questions

Issue / Error	Root Cause	Recommended Fix
'concurrently' is not recognized	Running npm run dev before npm install	Run 'npm install' in the project root first
ERR_COMPANY_CONTACT_MANDATORY	Settings lack company phone or Gmail	Open Settings and enter company WhatsApp & Gmail
P1001: Can't reach database	PostgreSQL service is not running or wrong port	Start PostgreSQL service and verify port in server/.env
Customer phone validation failed	Phone number is not exactly 10 digits	Enter 10-digit mobile number without +91 or dashes
Prisma client not found	Prisma schema not generated	Run 'npm run prisma:generate --workspace=server'

7. Verification & Production Commands

Run these commands anytime to ensure the health of your installation:

```
# Run TypeScript compiler checks across frontend & backend
npm run type-check

# Run the 36-scenario backend automated verification suite
npm run test:backend

# Compile production bundles
npm run build
```
